12. Propagate Frame 1

13. Selected Layer

Layer Blending Modes

The Blending Modes allow you to blend the active layer with the layers below in the Layer stack, allowing them to show through.

Layer Effects and Styles

Applies effects such as shadows, glows and bevels to the active layer. These effects will use the outline of the object on the layer.

Layer Mask

Allows you to mask off areas of your image.

Unify Layer Properties

When changing the position, visibility or Layer Styles in one frame, select these to apply them to all frames using the any of the same layers.

Propagate Frame 1

When selected, changes made to the first frame, will also apply to all other frames using the same layers.

Adjustment Layer

Apply adjustments (eg. Levels, Hue Saturation) to all layers below.
